Installation & Operation Notes

Antenna Installation

When installing the WiFiLink 2 on the aircraft, pay attention to the following two points:

Antenna Layout:

Ensure that the two tail antennas are fully spread apart to avoid entanglement and reduce signal interference.

Antenna Orientation:

Point the antennas upward to avoid obstructions from the fuselage or battery, ensuring optimal signal performance.

•How to Flash WiFiLink 2

Card Flashing Steps:

1Prepare Files

Copy WiFiLink-part0.bin and WiFiLink-part1.bin to the root directory of an empty SD card.

2 Upgrade Steps

Insert the SD card into the camera mainboard and power it on. The camera will enter upgrade mode (about 15 seconds), with the green light flashing. After the upgrade (about 1 minute), the green light will turn off, and the SD card will be cleared. Upon re-powering, new configuration files (gs.key and user) will be generated.

How to Obtain Configuration Files

Insert an empty SD card into the camera and power it on. It will generate the configuration files automatically.

•How to Set Parameters

It is recommended to use Notepad++ to edit the user file. Only the parameters listed under "Available values" can be modified, including:

Channel	Codec
ResolutionRatio	Bitrate
Mirror	Flip
Rotate	Contrast
Hue	Saturation
Luminance	•••••

How to Use with Radxa ZERO 3W

Visit:https://support.runcam.com/hc/en-us Contact our technical support team for detailed guidance.

•What to Do if There Is No Display

Check if the power supply is normal and verify that the Channel and Codec settings are correct.

•What to Do if FC OSD Information Is Missing

1Check Configuration

Verify that the configuration settings are correct. The three parameters should be: 115 (corresponding to 115200), 0, 1, or 2 (corresponding to Mavlink1 or 2).

2Check the Serial Port

Confirm that the FC serial port data is normal and available, and the wiring is correct, with TX and RX cross-connected.
