Specs Overview

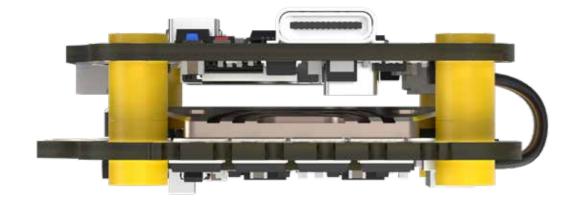

Product Name	SpeedyBee F405 V4 BLS 60A 30x30 Stack
Flight Controller	SpeedyBee F405 V4 Flight Controller
ESC	SpeedyBee BLS 60A 4-in-1 ESC
Bluetooth	Supported. For FC & ESC parameter settings
Wireless FC Firmware Flashing	NOT Supported
Wireless Blackbox Dwonload & Analysis	NOT Supported
Power Input	3-6S LiPo
Mounting	30.5 x 30.5mm (4mm hole size)
Dimension	45.6mm(L) x 44mm(W) x 18.3mm(H)
Weight	34g

Dimensions 2/14

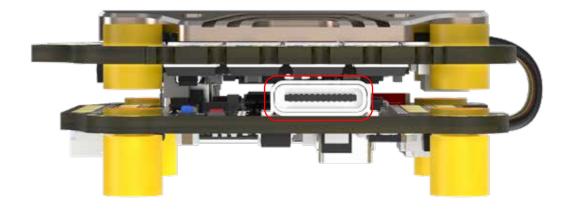

Important Stack Installation Note

Please ensure that the Stack is installed in the standard manner, with the flight controller (FC) on top and the electronic speed controller (ESC) on the bottom. Any damage resulting from improper installation is not covered under our warranty.

The installation method shown is incorrect and may cause direct contact between FC and ESC.

Package 3/14

SpeedyBee F405 V4 60A 30x30 Stack

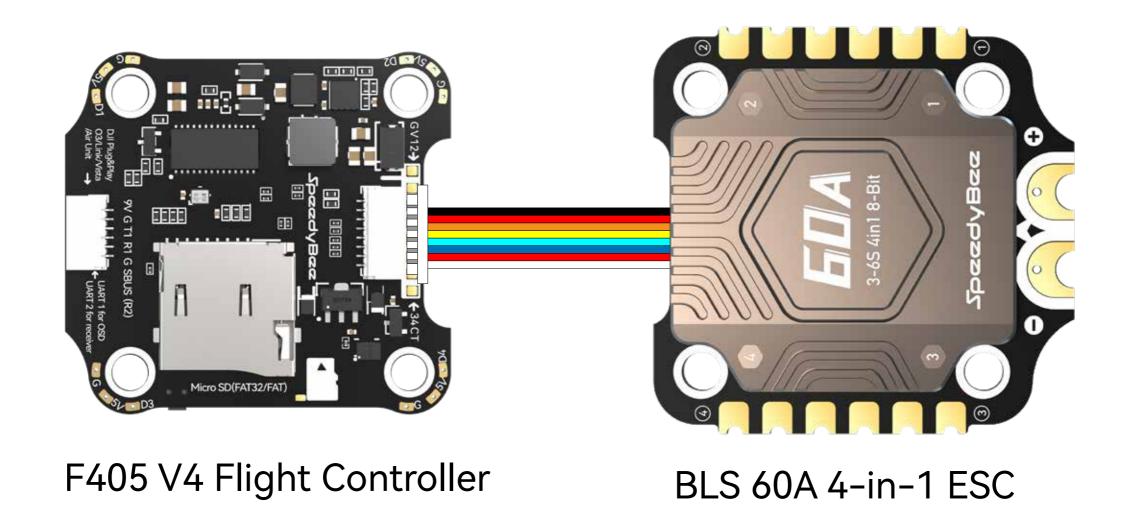

- 1 SpeedyBee F405 V4 Flight Controller x 1
- 2 SpeedyBee BLS 60A 4-in-1 ESC x 1
- 3 35V 1000uF Low ESR Capacitor x 1
- 4 M3 Nylon Nut x 5
- 5 M3 silicone O Ring x 5
- 6 M3*8mm Silicone Grommets(for FC) x 1
- 7 M3*8.1mm Silicone Grommets(for ESC) x 1
- 8 SH 1.0mm 25mm-length 8pin Cable(for FC-ESC connection) x 1
- 9 SH 1.0mm 75mm-length 8pin Cable* x 1
- 10 M3*30mm Iner-hexagon Screws x 5
- 11 DJI 6pin Cable(80mm) x 1
- 12 XT60 Power Cable(100mm) x 1

^{*} When the ESC tail faces the drone's front, use this cable for the flight controller and ESC; both ends plug interchangeably.

Use the 8-pin cable in the package to connect the FC and the ESC. Or solder 8 wires directly to the 8 pads on each end.

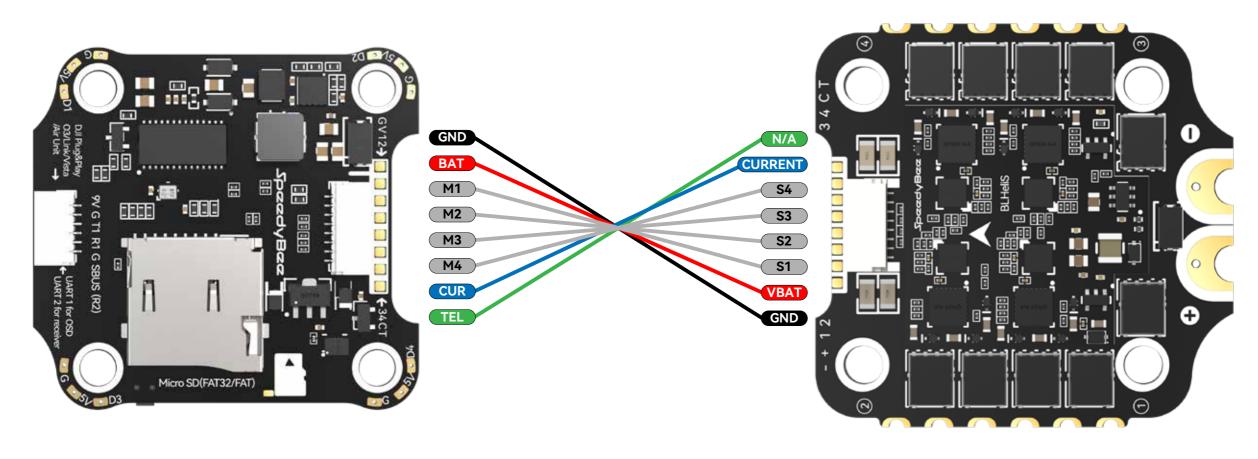

Method 1 - Using 8-pin cable

Use any end of the 8-pin JST cable to connect the FC to the ESC.

Method 2 - Direct soldering

Solder 8 wires to the 8 pads on each end referring to the pad definition below.

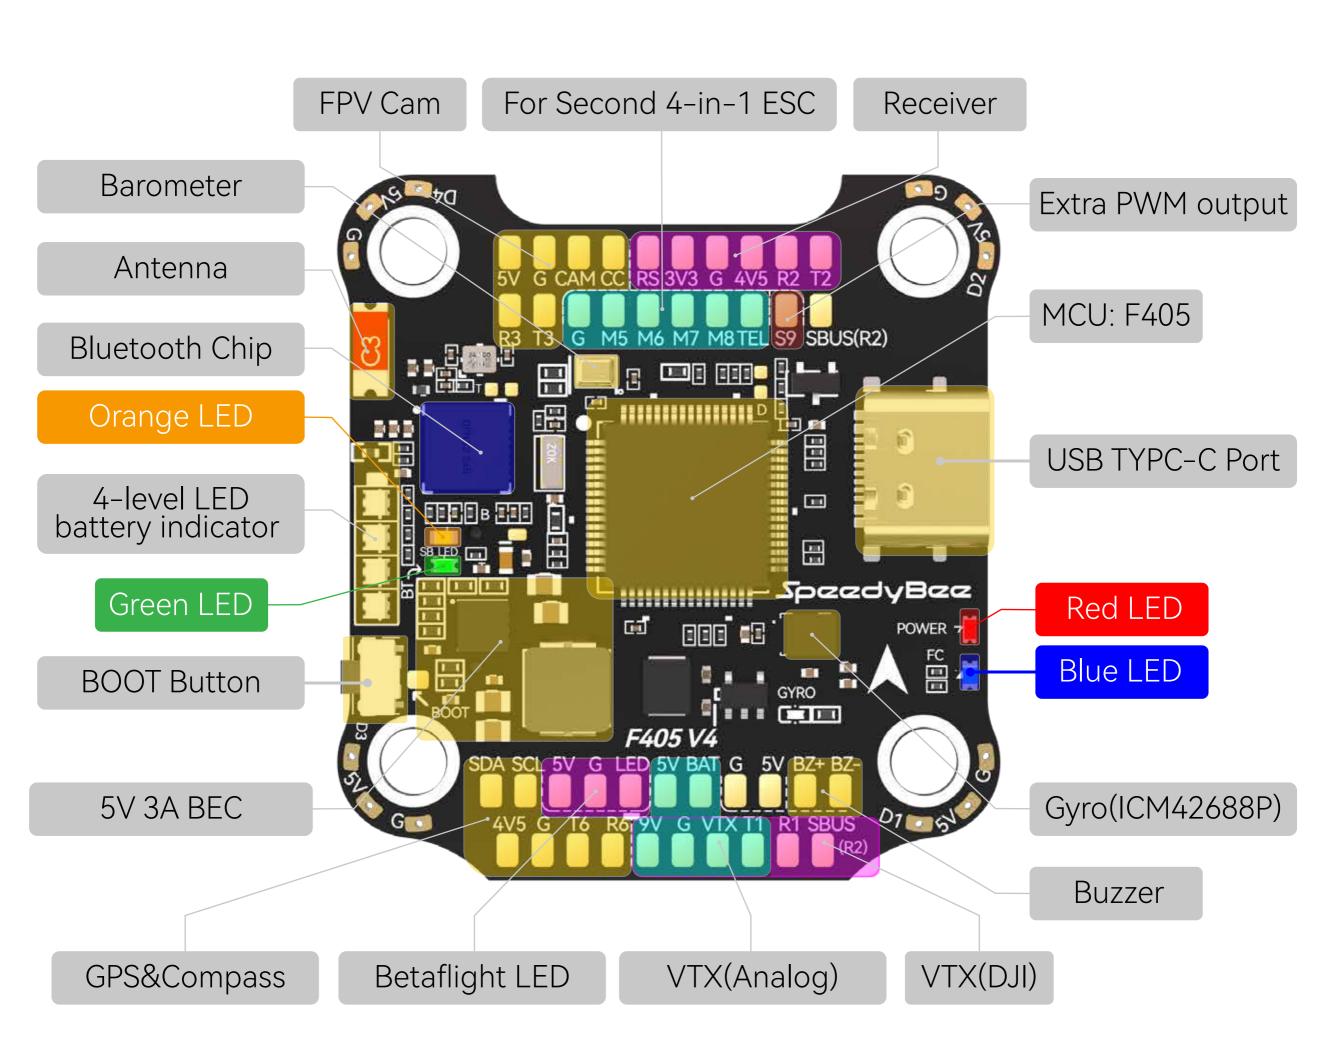

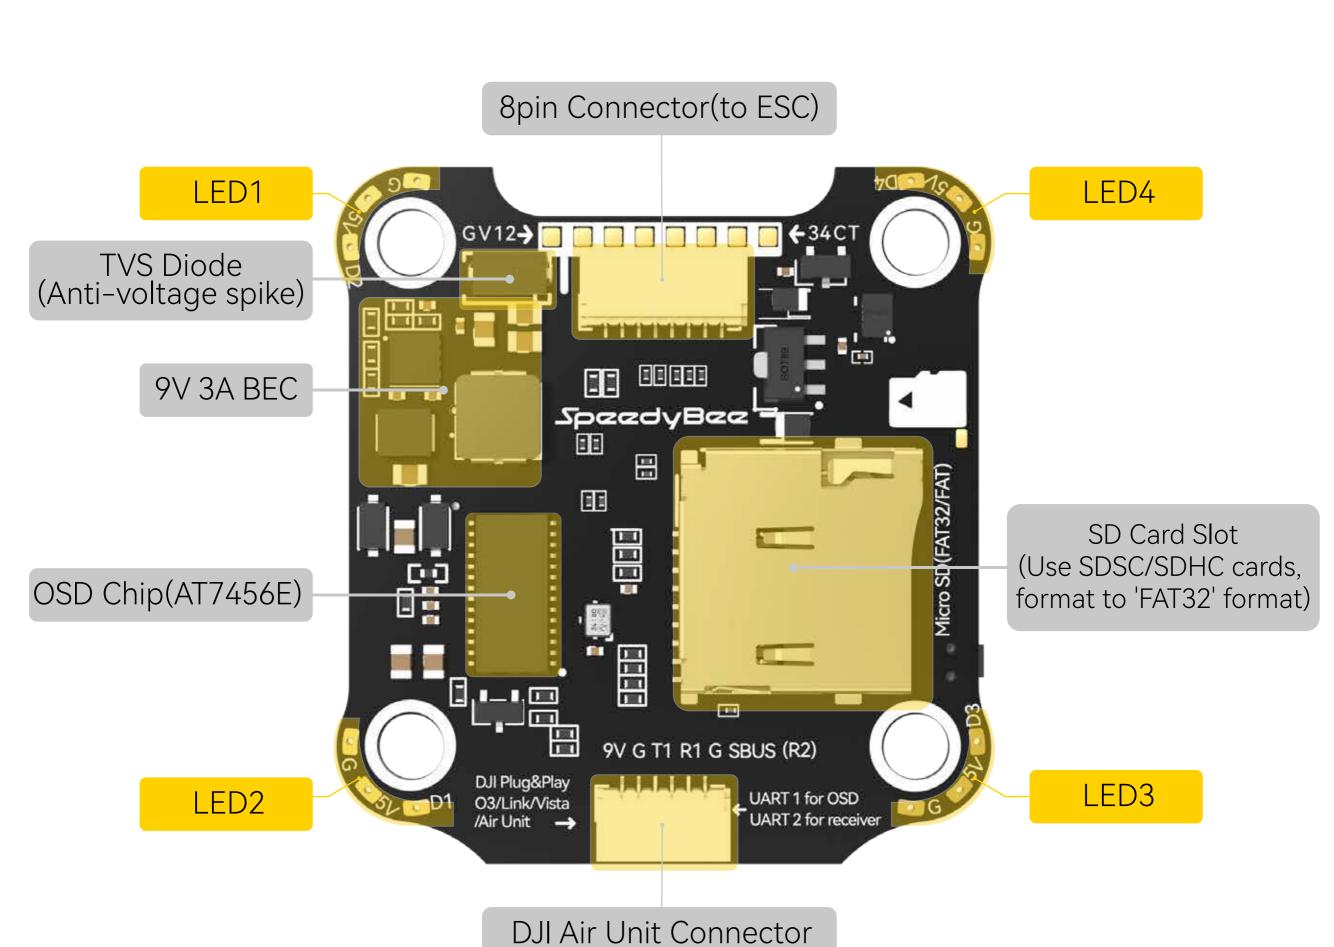

F405 V4 Flight Controller

BLS 60A 4-in-1 ESC

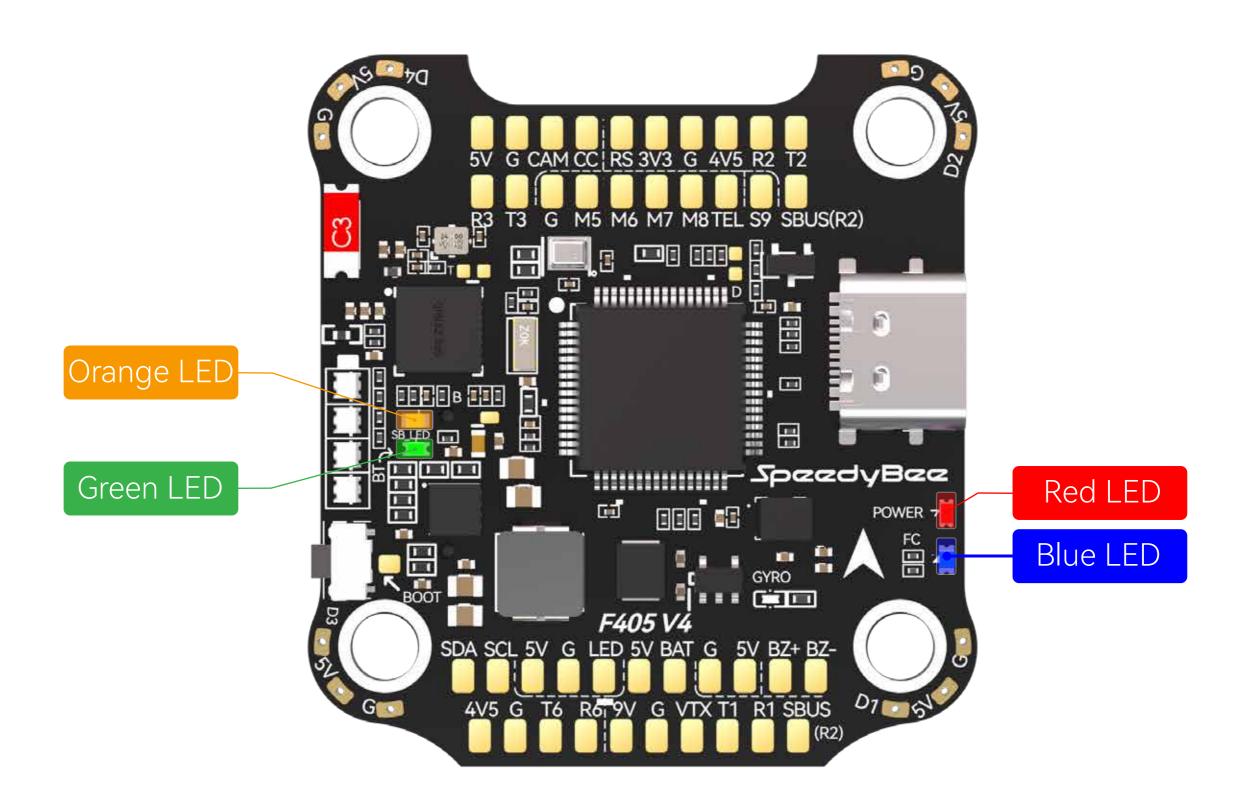

Part 2 - F405 V4 Flight Controller

Layout 5/14

■ LED Indicator Definition

- RED LED Power Indicator.Solid Red after powering up.
- GREEN LED Bluetooth status light. Solid Green indicates Bluetooth is connected.
- BLUE LED Flight controller status light which is controlled by the flight controller firmware.
 Orange LED LED Control Mode Indicator. It indicates the 4 sets of LED strips connected
- to LED1-LED4 pads on the corners of the flight controller are controlled by Betaflight firmware(BF_LED mode) or the Bluetooth chip(SB_LED mode).

Solid Orange: tindicates the 4 x LEDs are in SB_LED mode. In this mode, when the FC is powered on and in standby mode, press the BOOT button to cycle the display modes of the LEDs.

 ${f OFF}$: indicates the 4 x LEDs are controlled by Betaflight firmware. Long press the button for 3 seconds to switch the control modes between BF_LED mode and SB_LED mode.

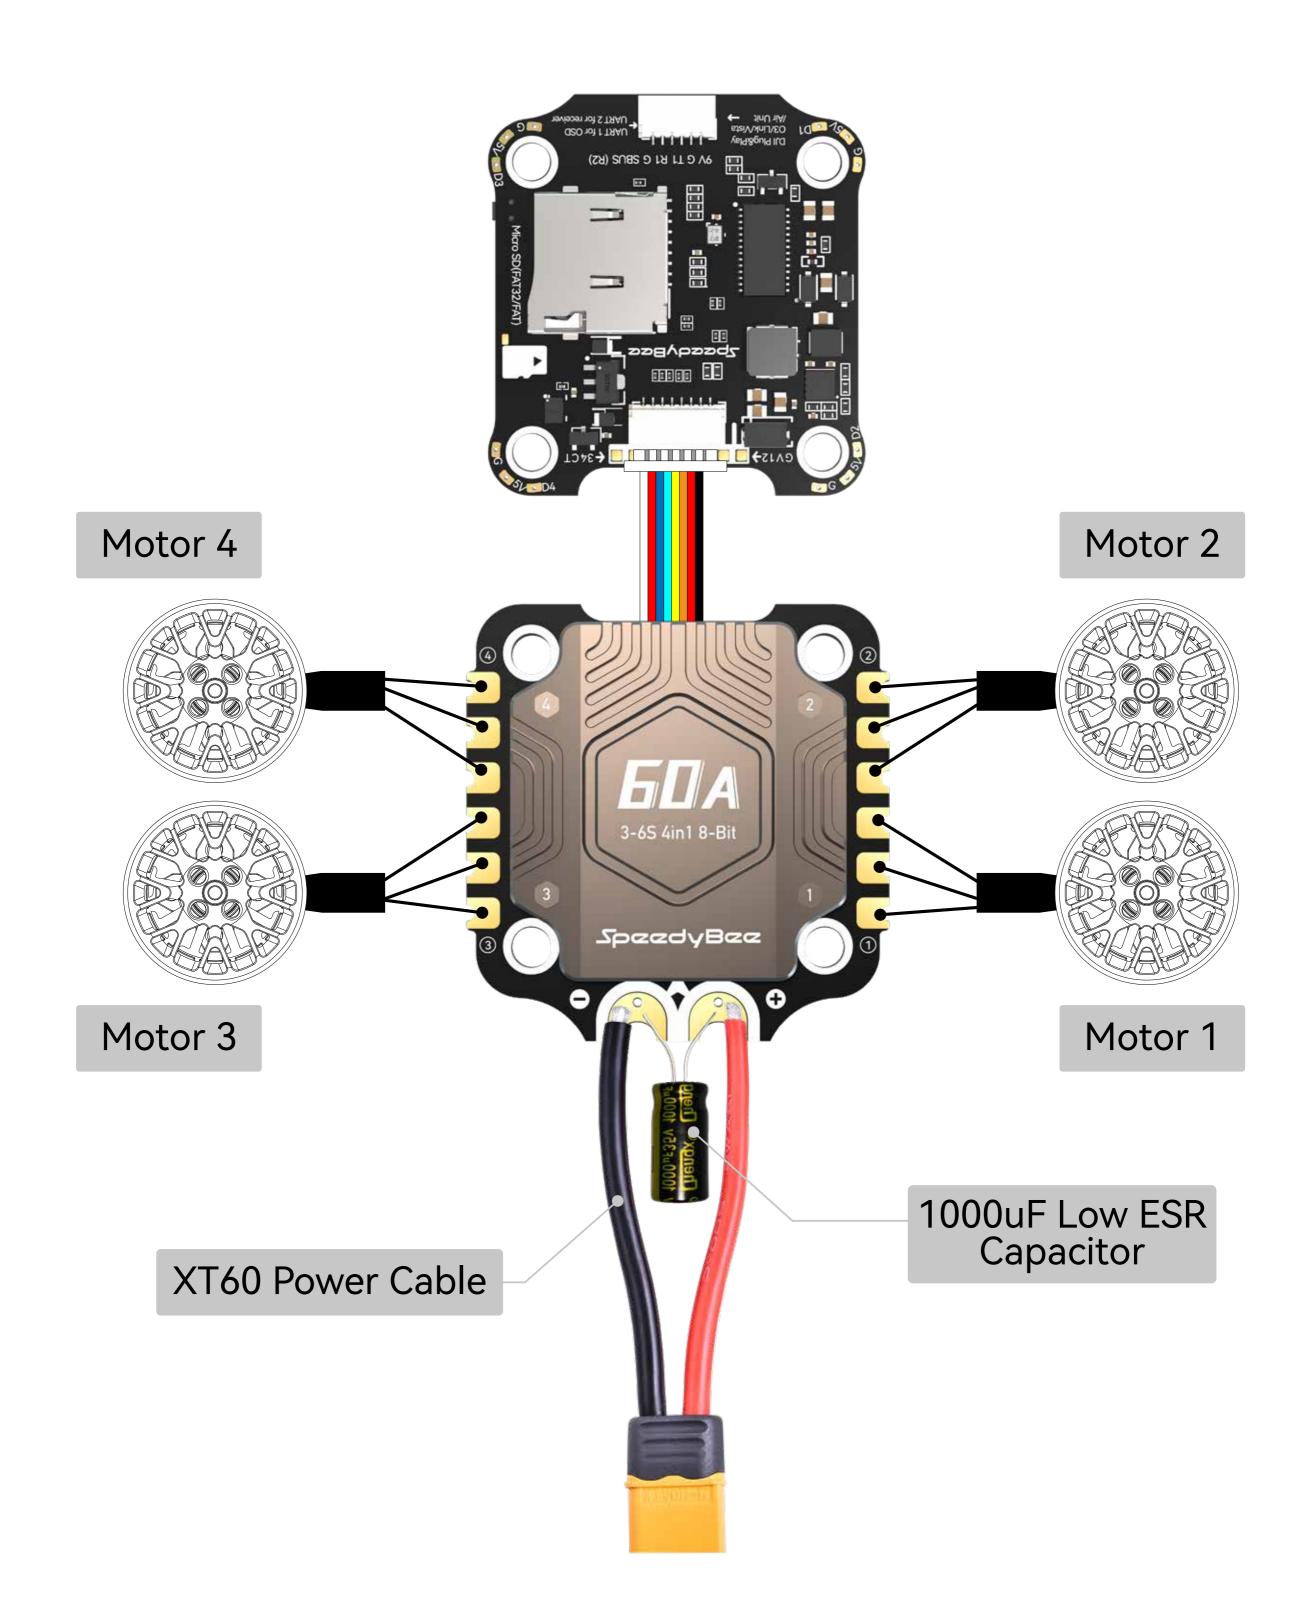

■ BOOT Button

[A]Only if the flight controller gets bricked and can't power up, please follow these steps to re-flash firmware for it:

- 1 Insert a USB A to TYPE-C cable to your PC.
- ② Press and hold the BOOT button, insert the USB cable into the flight controller, then release the BOOT button.
- ③ Open Betaflight/INAV configurator on the PC, go to the 'Firmware Flashing' page, choose the target 'SPEEDYBEEF405V4' and flash.

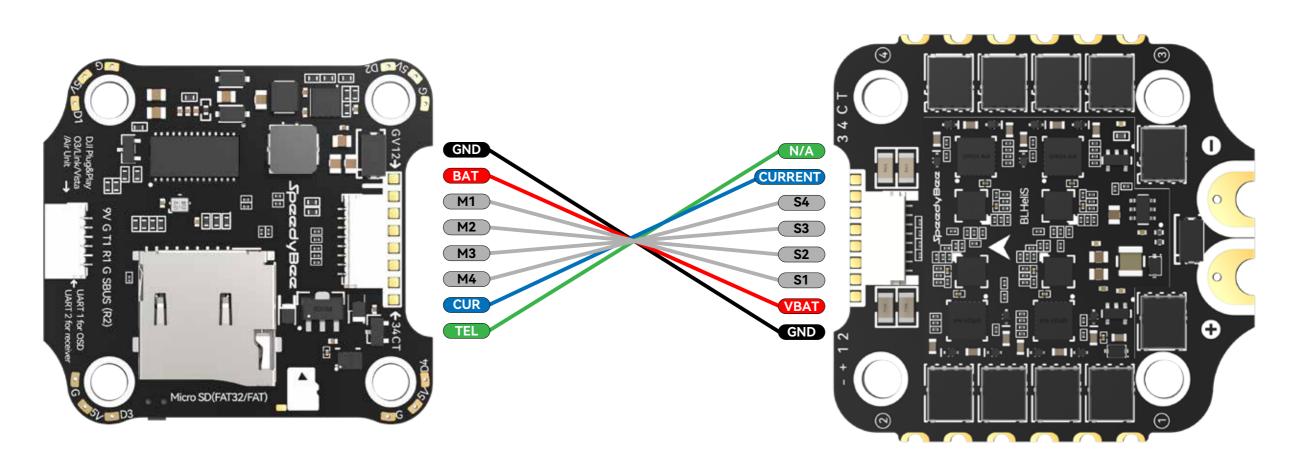

[B]. When the FC is powered on and in standby mode, the BOOT button can be used to control the LED strips connected to LED1-LED4 pads on the corners. Short-press the BOOT button to cycle the LED displaying mode. Long-press the BOOT button to switch between SpeedyBee-LED mode and BF-LED mode. Under BF-LED mode, all the LED1-LED4 strips will be controlled by the Betaflight firmware. The default mode is BF-LED mode.

Note1: In order to prevent the stack from being burnt out by voltage spikes on powering up, it is strongly recommended to use the Low ESR capacitor in the package.

Note2: The FC and ESC can also connected via direct soldering. Soldering pads definition is as follows.

F405 V4 Flight Controller

BLS 60A 4-in-1 ESC

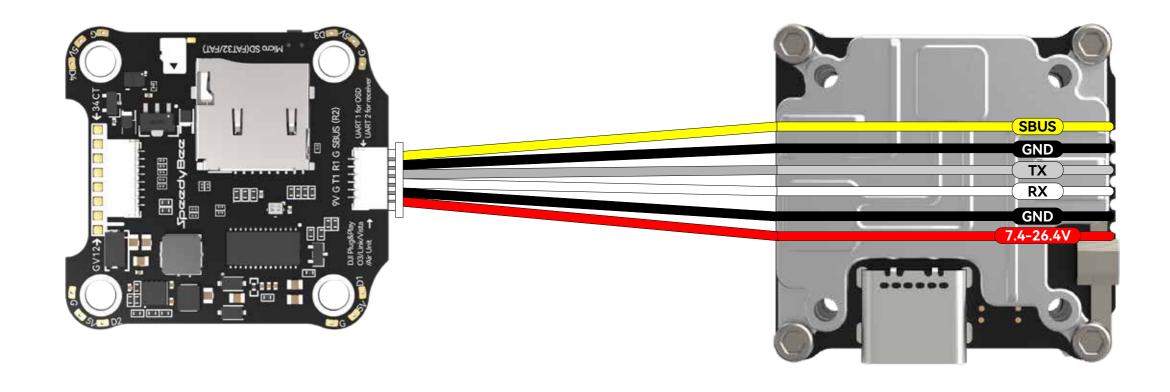

Cable Connection vs DJI 03 Air Unit

Use 6-pin cable comes with the O3 Air Unit

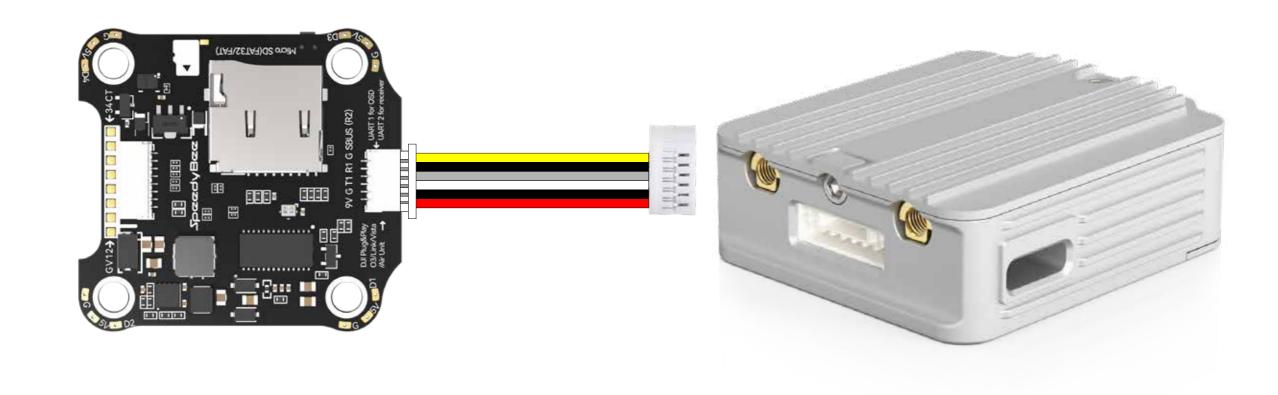

Cable Connection vs RunCam Link/ Caddx Vista Air Unit

Use 6-pin cable comes with the F405 V4 stack (See the accessory No.11 in the package section)

Cable Connection vs DJI Air Unit V1

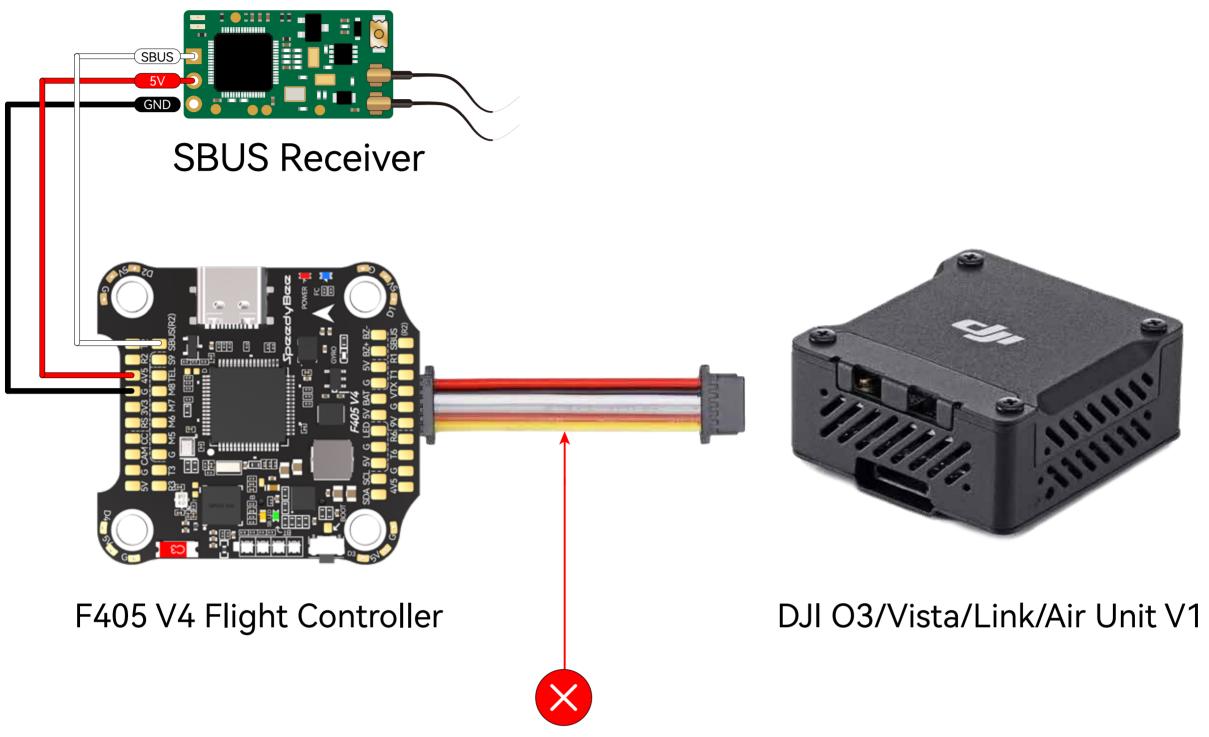

Use 6-pin cable comes with the F405 V4 stack (See the accessory No.11 in the package section)

Importance notice for SBUS receiver

When using an SBUS receiver, the SBUS signal wire of the receiver must be connected to the SBUS pad on the front side of the flight controller (this pad internally uses UART2).

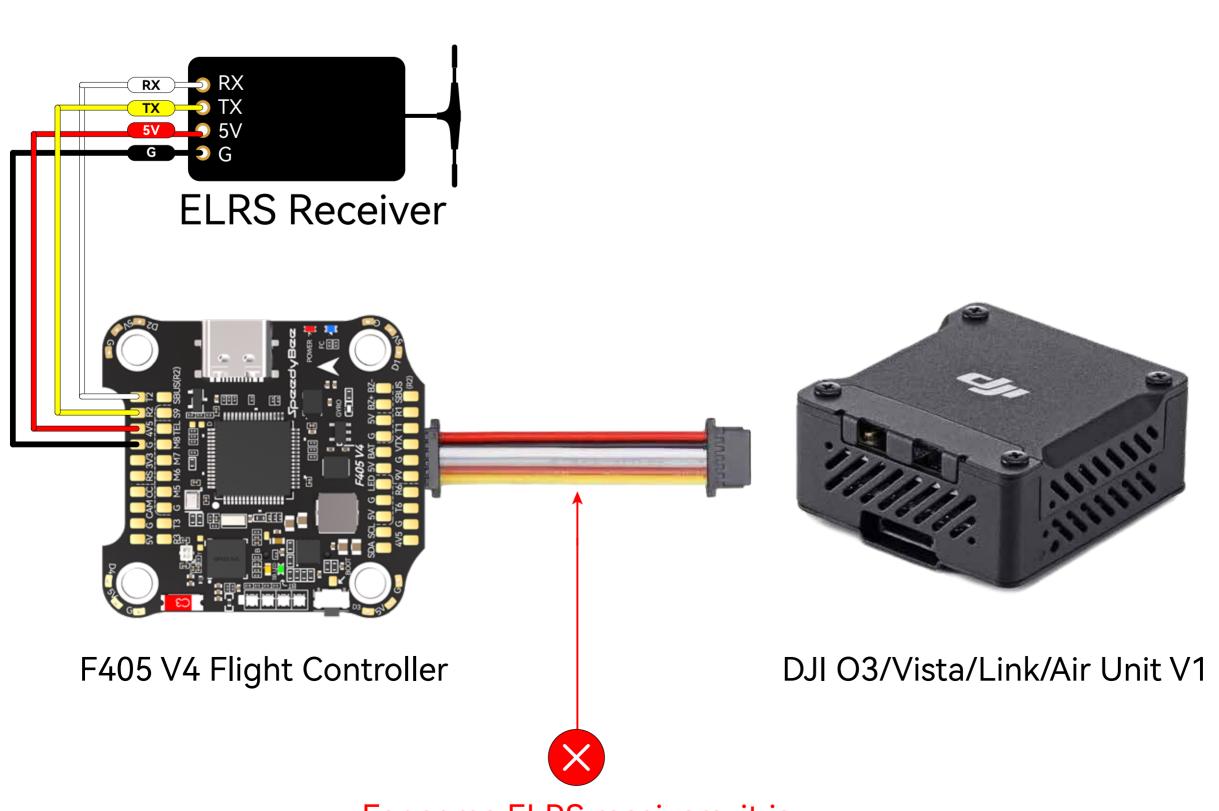

If you are also using the DJI Air Unit(O3/Link/Vista/Air Unit V1), you will need to disconnect the SBUS signal wire from the Air Unit harness. Failure to do so will prevent the SBUS receiver from being properly recognized by the flight controller. You can use tweezers to pick out the SBUS wire from the 6-pin harness connector (or directly cut this wire) and insulate the exposed part of the wire carefully.

Do NOT connect this wire to assure the external SBUS receiver work properly!

Importance notice for ELRS receiver

We recommend connecting the ELRS receiver's TX and RX to the T2 and R2 pads on the flight controller. However, when using the DJI Air Unit simultaneously, some ELRS receivers may not be recognized properly by the flight controller. If you encounter this issue, you need to disconnect the SBUS signal wire from the Air Unit harness. You can use tweezers to pick out the SBUS wire from the 6-pin harness connector (or directly cut this wire) and insulate the exposed part of the wire carefully.

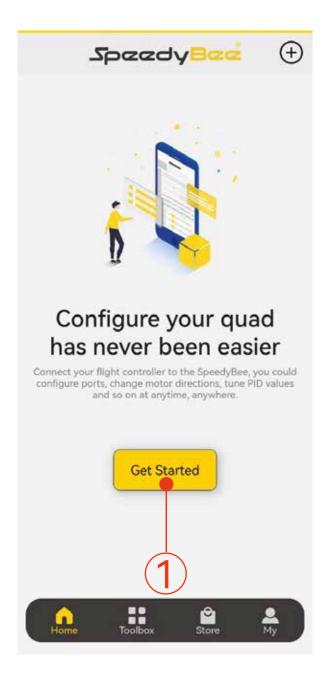

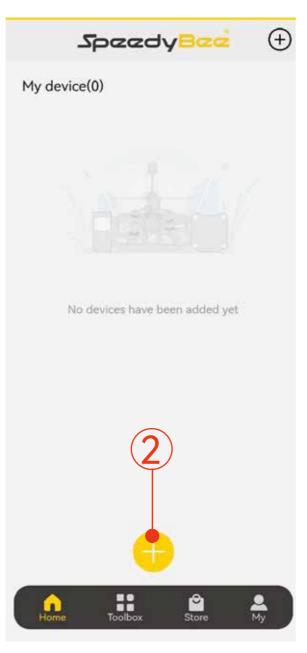

For some ELRS receivers, it is necessary to disconnect this wire in order to function properly!

Get the SpeedyBee App

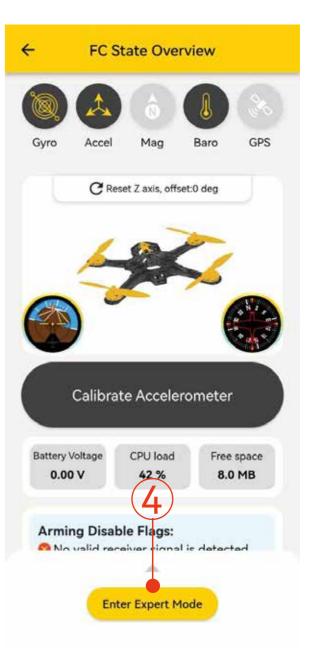

Search 'SpeedyBee' on Google Play or App Store. Or download the Android .apk file on our website: https://www.speedybee.com/download.

■ FC Configuration

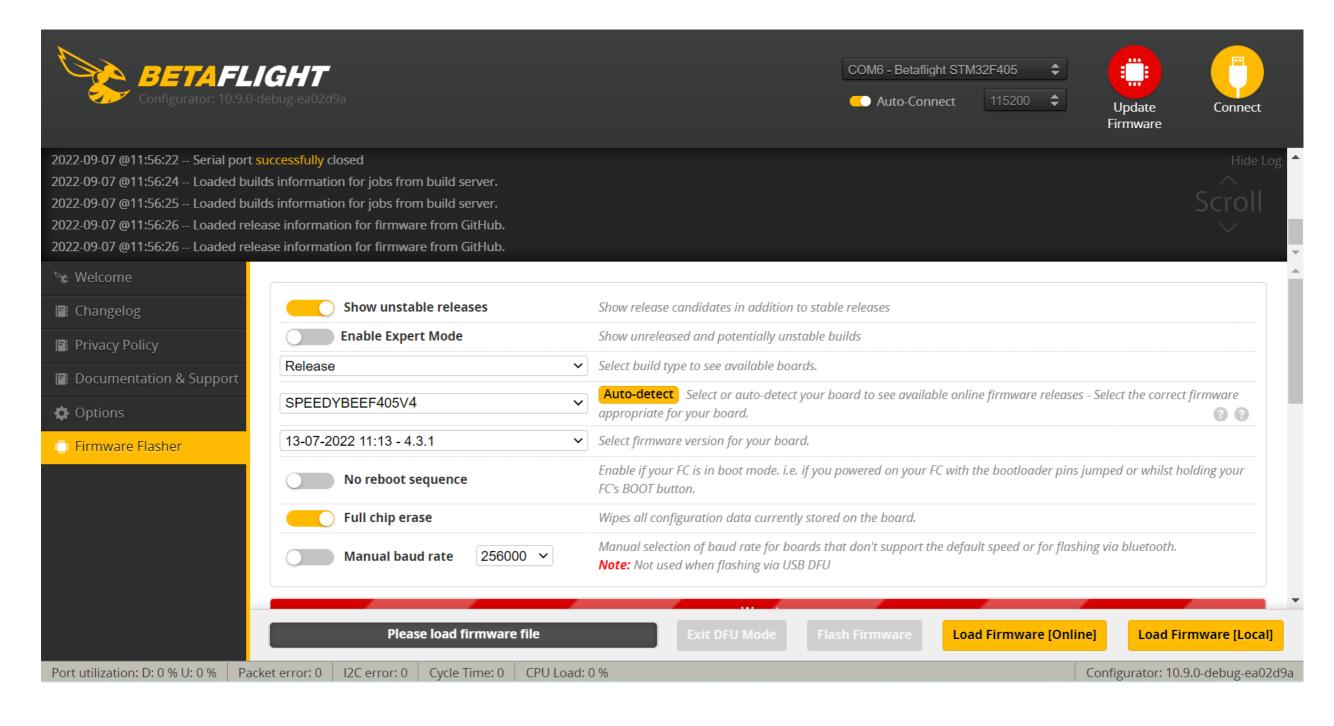

FC Firmware Update

SpeedyBee F405 V4 flight controller does not support wireless firmware flashing, so please flash firmware for it on your PC following the steps below:

- ① Connect the flight controller to the PC with a USB cable
- ② Open Betafight/ INAV configurator on your PC. Take Betaflight configurator as an example, go to the 'Firmware Flashing' page, choose the target 'SPEEDYBEEF405V4' and flash.

SDA & SCL pads on front side. Used for magnetometer, sonar, etc.
Supported. [A]. Press and hold BOOT button and power the FC on at the same time will force the FC to enter DFU mode, this is for firmware flashing when the FC gets bricked. [B]. When the FC is powered on and in standby mode, the BOOT button can be used to controller the LED strips connected to LED1-LED4 connectors on the bottom side. By default, short-press the BOOT button to cycle the LED displaying mode. Long-press the BOOT button to switch between SpeedyBee-LED mode and BF-LED mode. Under BF-LED mode, all the LED1-LED4 strips will be controlled by Betaflight firmware. RSSI Input Supported. Named as RS on the front side. Smart Port / F.Port Not supported BetaFlight(Default), INAV Firmware Target Name SPEEDYBEEF405V4 Mounting 30.5 x 30.5mm(4mm hole diameter) Dimension 41.6(L) x 39.4(W) x 7.8(H)mm	Traditional Betaflight LED Pad	! ! · · · · · · · · · · · · · · · · · ·

Part 3 - SpeedyBee BLS 60A 4-in-1 ESC

Layout 10/14

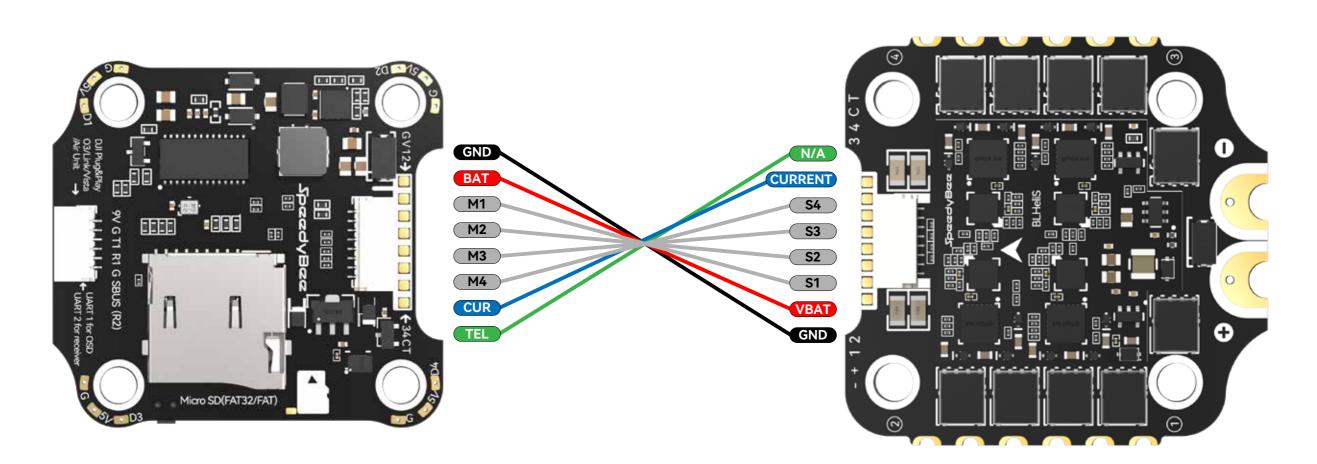

Note1: In order to prevent the stack from being burnt out by voltage spikes on powering up, it is strongly recommended to use the Low ESR capacitor in the package.

Note2: The FC and ESC can also connected via direct soldering. Soldering pads definition is as follows.

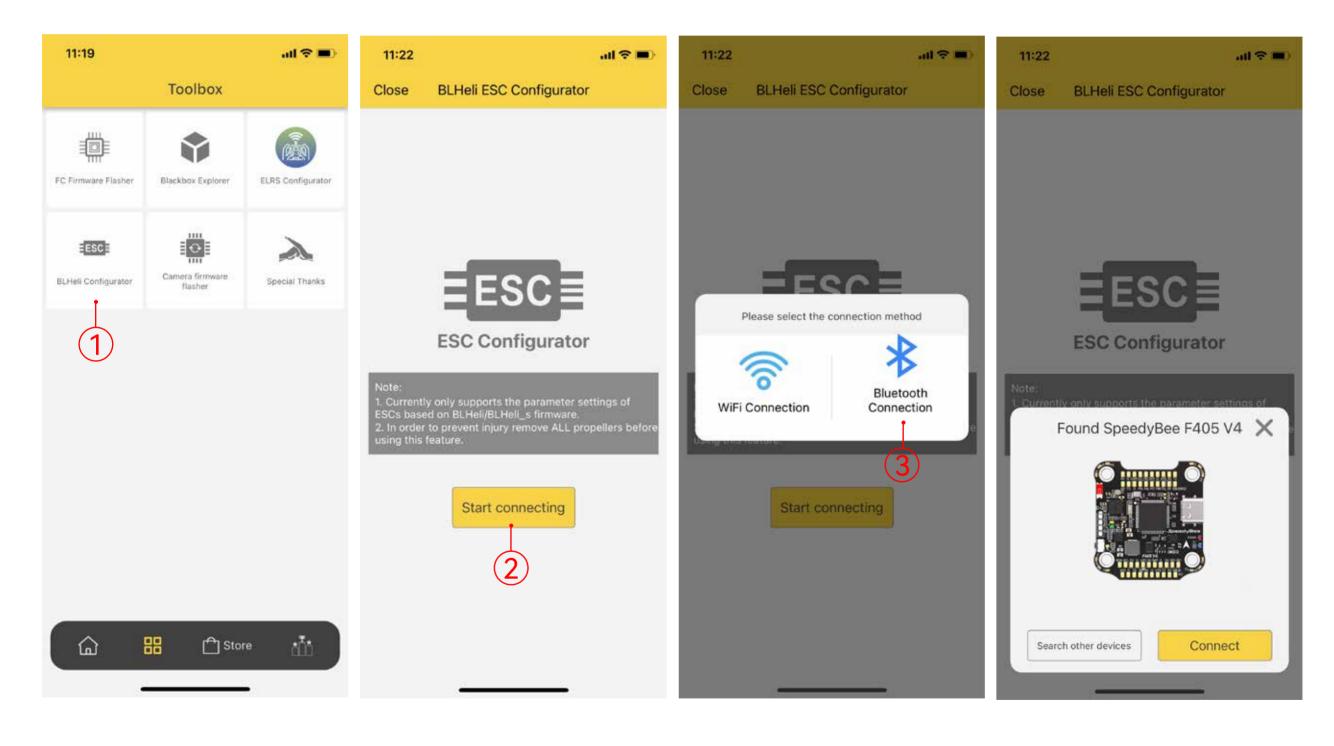

F405 V4 Flight Controller

BLS 60A 4-in-1 ESC

ESC Configuration

■ You could use the SpeedyBee APP to configure this ESC wirelessly for both BLHeli_S or Bluejay firmware. Steps:

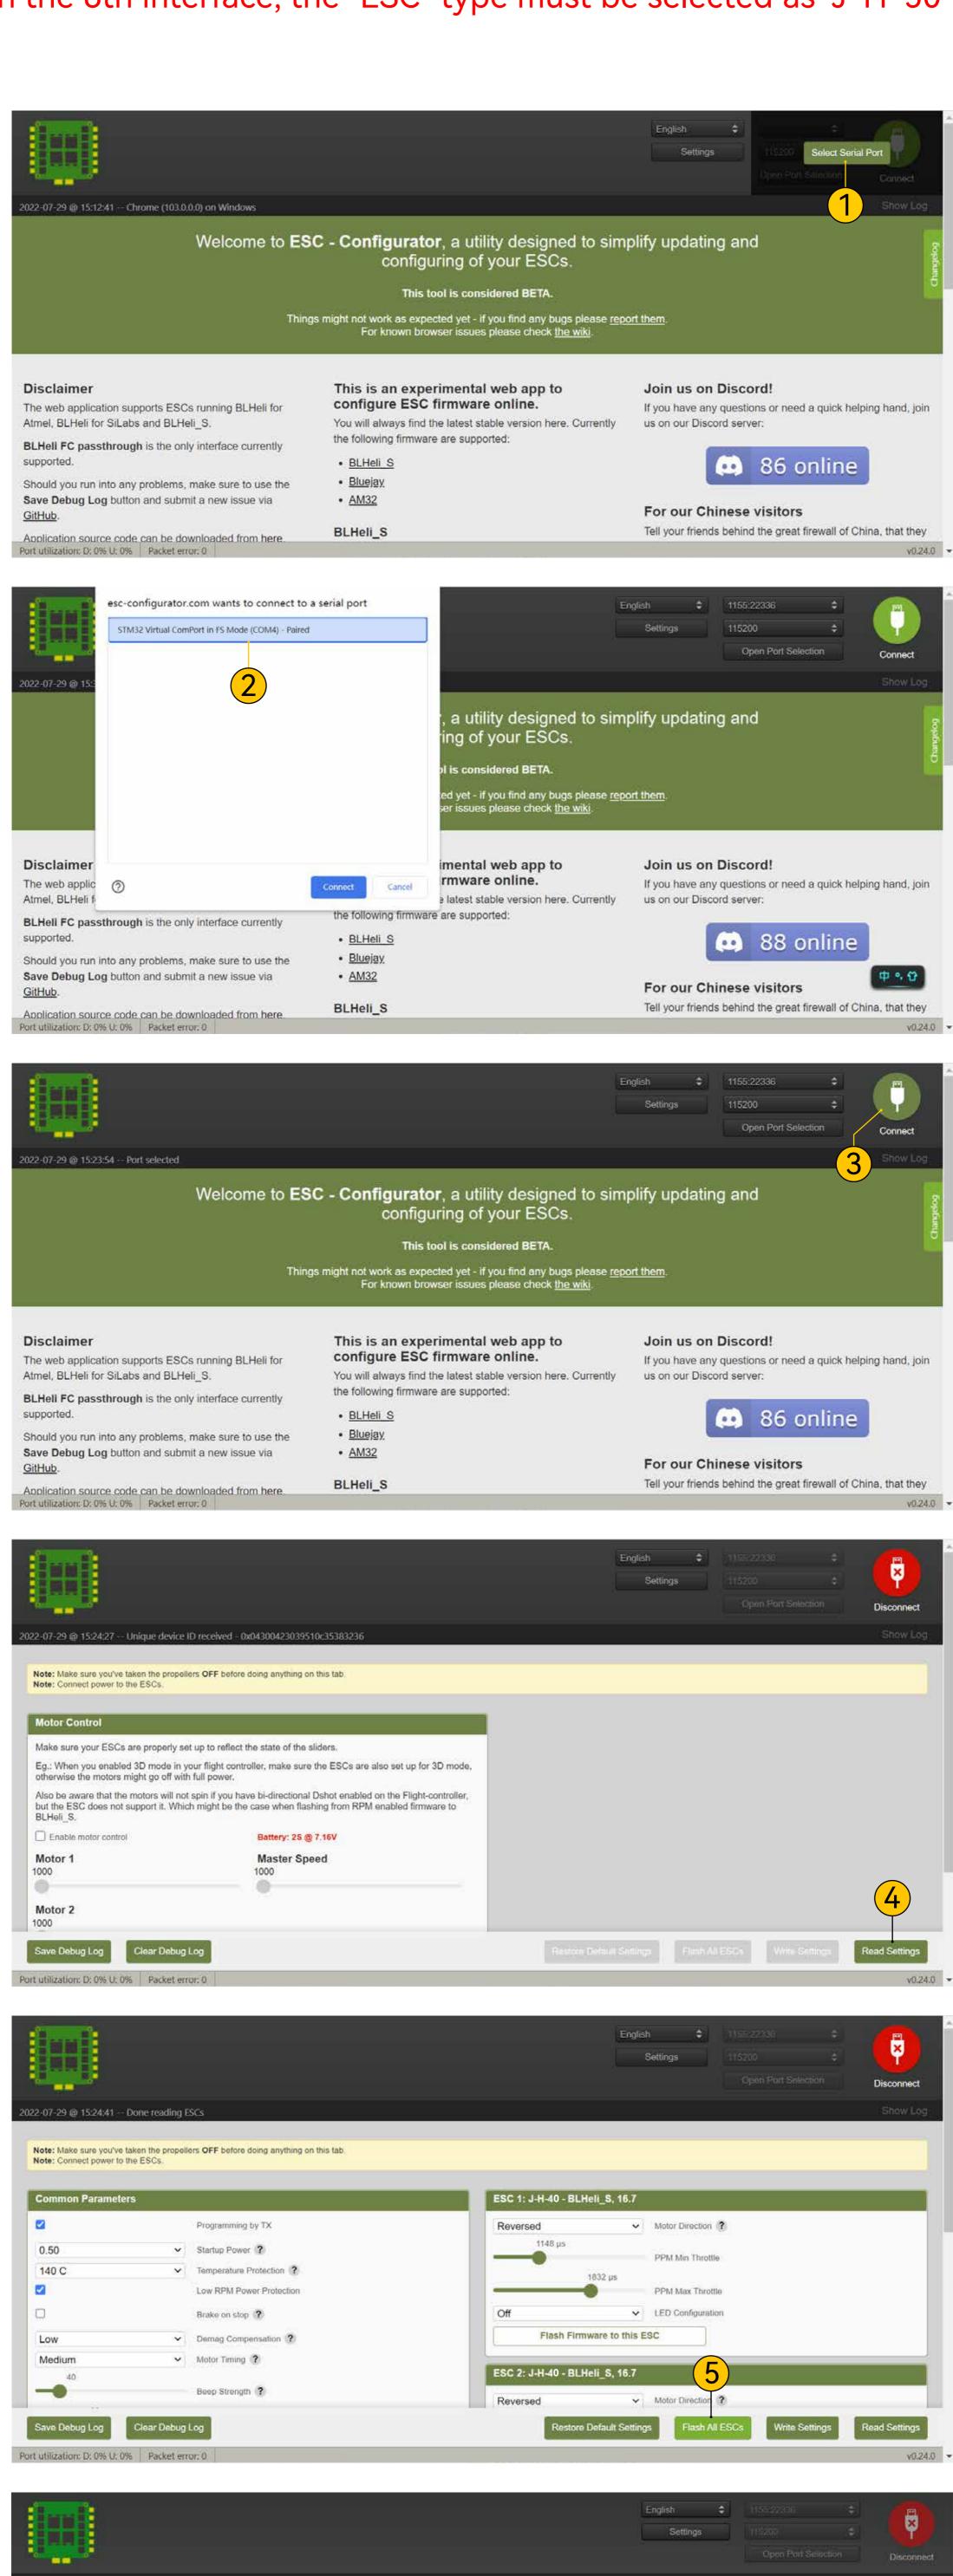

■ You could also use PC configurators to configure this ESC. We recommend the ESC Configurator. Please use Google Chrome browser and visist: http://www.esc-configurator.com.

■ This 8-bit 60A ESC can run BLHeliS or Bluejay firmware. It is loaded with BLHeliS firmware by default. You could also flash it to Bluejay firmware which can support RPM filtering and Bi-directional Dhsot.

Firmware flashing steps are as follows:

- Remove all the propellers from your drone.
- Ensure that the flight controller is connected properly to the ESC, then power up the drone. This step ensures that the ESC starts up correctly.
- Connect the flight controller to the computer using a USB Type-C cable.
- Open the Chrome browser and visit the following website: https://www.esc-configurator.com/
- Follow the firmware flashing steps as shown in the screenshots below Important note:

On the 6th interface, the "ESC" type must be selected as "J-H-50".

Specifications

Product Name	SpeedyBee BLS 60A 30x30 4-in-1 ESC
Firmware	BLHeli_S J-H-50
PC Configurator Download Link	https://esc-configurator.com/
Continuous Current	60A * 4
Burst Current	80A(10sec)
TVS Protective diode	Yes
External Capacitor	1000uF Low ESR Capacitor(In the package)
ESC Protocol	DSHOT300/600
Power Input	3-6S LiPo
Power Output	VBAT
Current Sensor	Support (Scale=400 Offset=0)
ESC Telemetry	Not supported
Mounting	30.5 x 30.5mm(4mm hole diameter)
Dimension	45.6(L) * 44(W) *8mm(H)
Weight	23.5g
